

Subject: Application for seasonal internship abroad

Dear Sir or Madam,

Currently in my 3rd year of engineering school at ESILV, I am looking for an internship abroad for this summer, from 5 June to 5 September, in order to perfect my English while obtaining additional professional experience.

My training as a general engineer fascinates me in particular all matters relating to Big Data. In this way, the more I learn, the more I'm looking forward to learn and work. Rigorous, the experiences gained during the various collective projects within my school allowed me to approach marketing, team cohesion and a sense of responsibility respecting an annual schedule in addition to increase my programming skills. I also enjoy being in touch with people and working as a team, and my recent internship as a summer camp counsellor has made it possible to highlight and perfect these achievements. I also was able to actively participate in the associative life within my school as a member of the Student Office.

Finally, my curriculum in preparatory classes or my 12 years of piano practice at the classical conservatory, beyond preparing me for entrance exams to the 'grandes écoles' or allowing me to acquire my musical degree, have both taught me the rigor and the work well done. Competitive swimming in university taught me overcoming my limits and acquiring full determination.

I am at your disposal for any further information. Additional details can be found in my resume and I look forward to meeting with you

Yours faithfully,

Luc BERTIN
